Education

Introduction to Computer Science   Jan 2020 - Jan 2021
HarvardX
Harvard and Yale University online course that introduces Computer Science and web development.

Employment

Full-Stack Developer   Jan 2021 - Present
Free Lancer, Remote
As a full-stack developer, I did the project's design, frontend and backend.

I started by making a low-fidelity mockup, if the mockup went according to the customer's expectations, then I would do a high-fidelity mockup where the customer could see exactly how the website would be.

Then following the design, I would create the code for the front and backend, using the tools I understand best. This way I created multiple websites responsive to different screens, intuitive and easy to use.

I developed REST API'S that received information from the user and stored it in a database either SQL or NoSQL.

Goals

I aim to work with a team of programmers, to continue my learning. Continuing to train myself in new technologies, both backend and frontend.
Move up in my career as a web developer.

About Me

- ■ I am motivated to learn new technologies
- ■ I'm organized
- ■ I'm receptive to feedback

- ■ I like to work in a team
- ■ I'm creative

Personal details

Date of birth
June 17th, 1997
